Problem Statement :

Create a signup page where a user can register and a login page
to log in with the details provided during registration

Successful login should redirect to a profile page which should
contain additional details such as age,dob,contact, etc
that can be updated by the user

Points to remember :

Html, CSS, JavaScript, PHP should be in separate files.

CSS should be written using sass/scss. The project should
contain both scss file and compiled css file.

The form submission should be handled using ajax, do not use
HTML form action. Use bootstrap to make page responsive
.
Don't use more than two fonts and any icons or images should
be in SVG format Use jQuery to simplify dom manipulations.

User data should be stored in MySql DB and also in the JSON file.
Use prepared statements while performing MySql queries.

Host it on Heroku or AWS
